Do your patients need asthma case management?

Managing Asthma Through Case-management in Homes (MATCH) is the model for an intensive home-based asthma case management service for children and adults with uncontrolled asthma. Programs using the MATCH model are available in many counties across Michigan.

A study of MATCH participants showed:

- 70% decrease in hospitalizations
- 51% decrease in ED visits
- 53% decrease in nights awake from asthma
- 57% decrease in missed work days
- 40% decrease in missed school days
- 26% increase in Asthma Control Test® Scores

Referral criteria:

- Referrals can come from: health care institutions, community clinics, health care providers, schools, nursing staff, allied health professionals, health plans, or the families themselves
- Children or adults – especially those who have had one or more ED visits or hospital admissions, unscheduled office visit (s), over-use of albuterol, missed school days, due to asthma.
- Diagnosis of asthma – priority given to uncontrolled asthma, but also those newly diagnosed

Many Medicaid health plans cover these services, and services are often available for patients without insurance.
